

Postdoctoral Research Fellow

Department of Microbiology

Lab of Dr. Christopher Snyder

A postdoctoral position is available immediately in the Snyder laboratory at Thomas Jefferson University in the Department of Microbiology and Immunology. The Snyder laboratory studies immunity to viral infections with a focus on cytomegalovirus (CMV). Current research is focused on the activation and resolution of inflammation in various tissue environments and the impact of these pathways on lymphocytes, myeloid cells, viral spread and the efficacy of vaccination.

Candidates should have an MD, DVM or PhD degree and a first-authored paper accepted in a peer-reviewed immunology or microbiology journal. Prior experience with viruses and immunological laboratory approaches is desired, but not required. Excellent verbal and written English language skills are also required.

If you have any interest in joining our group, or learning more about potential projects, please include a cover letter describing your current research and your goals for your postdoctoral training, a CV, and the names of 3 references.
